Empowering Respiratory Patients
- to have their views heard for a mutual NHS

Nicola Cotter, Louise Peardon, Roy Hunter

Background

The patient involvement story...

Patient, carer and public involvement has been actively promoted by the Scottish Government since the initial comments in Patient Focus Public Involvement (PFPI) in 2001. “It is no longer good enough to simply do things to people; a modern healthcare service must do things with the people it serves.”

In 2007, ‘Better Health, Better Care: Action Plan’ stated that the NHS was to.... “move to a more mutual NHS where partners have real involvement, representation and a voice that is heard.”

For those who are living with a respiratory long term condition, engaging with the NHS can be considerably challenging.

Aim

The aim of the Chest Voices Project at CHSS was to develop a robust and sustainable patient involvement training package, applicable to all respiratory patients, to empower their voices in the development of respiratory services.

Methodology

The Long Term Conditions Unit at the Scottish Government funded CHSS to adopt the existing highly successful Heart Voices Scotland patient and carer involvement training programme into an accessible format for respiratory patients. CHSS have been delivering Heart Voices Scotland, in partnership with the British Heart Foundation for the last five years. The existing Voices Scotland team engaged with Respiratory Networks and Pulmonary Rehabilitation Teams across Scotland to establish what was required to ensure effective public involvement within respiratory services. CHSS also engaged with the British Lung Foundation to discuss how the training could benefit members of their Breathe Easy Groups across Scotland. Pilot areas were established in the Scottish Borders and the Lochaber Health Board and the Voices Scotland team delivered Taster sessions to the CHSS Affiliated Chest Groups and Breathe Easy Groups before offering a ‘taster’ session or full comprehensive training to the CHSS Respiratory MCNs who were then encouraged to form a patient involvement sub group to take them forward.

Respiratory MCN Engagement

Managed Clinical Networks (MCNs) for Respiratory Disease across Scotland should be informed of any opportunities for patient involvement within the NHS as a result of the Ches Voices project.

As well as being new networks, the concept of Patient Involvement was very much in its infancy, with some networks looking to CHSS to guide them and ‘kick-start’ their work with patients and carers. The ‘Mutual MCN’ model developed by CHSS for the MCN 10 yrs on conference in 2008 proved a very valuable tool in helping to encourage their involvement.

NHS Lothian, Lanarkshire, Greater Glasgow & Clyde and Highland provided the Pilot sites and the Voices Scotland Team delivered taster sessions to the Breathe Easy Groups and some Pulmonary Rehabilitation groups in these areas to generate interest.

Results

The training programme

The pilot format of the Chest Voices training programme runs over two days and is presented in an accessible format for patients and carers to empower them to have their views heard and ultimately improve NHS respiratory services in Scotland.

It is presented over six hours on two non-consecutive days, starting later in the morning to suit the participants. The issues gathered at the training were fed back to the Respiratory MCNs who were then encouraged to form a patient involvement sub group to take them forward.

The evaluation

The pilot courses trained 27 people over the four NHS boards. The table below shows how participants scored the various elements of the day. (Scores are out of 5).

<table>

Conclusions and recommendations

The Chest Voices Programme has demonstrated that it is possible to empower respiratory patients through accessible training and good quality support. Some of the main conclusions from the Pilot Report are detailed in the table below.

<table>
<thead>
<tr>
<th>Conclusion</th>
<th>Recommendation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Poor health of the respiratory patients affects their ability to attend the training</td>
<td>Endeavour to offer Chest Voices training during the months of April- September; providing the winter months</td>
</tr>
<tr>
<td>CHSS staff to use the Model of a Mutual MCN to encourage all parts of the NHS to set up effective ways for patients and carers to become involved; CHSS staff to work with the Respiratory Networks to encourage the setting up of patient/carer sub groups</td>
<td></td>
</tr>
<tr>
<td>CHSS staff to encourage the networks to provide support. Where this is not available, CHSS will provide support for 6 months post Chest Voices to keep the momentum going</td>
<td></td>
</tr>
<tr>
<td>A Voices Scotland newsletter to be developed to provide information and opportunities to get involved</td>
<td></td>
</tr>
</tbody>
</table>
